

Notes 1

What is Markdown?

Markdown is a lightweight markup language for creating formatted text using a plain-text editor. Markdown is widely used for blogging, instant messaging, and large language models, and also used elsewhere in online forums, collaborative software, documentation

What is Git?

Git is an open-source, distributed version control system designed to track changes in source code and files over time. Created by Linus Torvalds in 2005, it allows multiple developers to work on the same codebase simultaneously without overwriting each other's work. Instead of saving a list of file differences, Git takes a "snapshot" of your entire project every time you save your progress.

What is GitHub?

GitHub is a cloud-based platform where developers store, manage, share, and collaborate on software code. Think of it like Google Docs, but specifically designed for programming files. It acts as a massive online folder (called a repository) where individuals or entire teams can keep their code safe and synchronized.

What is Slack?

Slack is a cloud-based team communication platform developed by Slack Technologies, which has been owned by Salesforce since 2021. Slack is primarily offered as a business-to-business service, with its user base being predominantly team-based businesses while its features are focused on business administration and communication.
