Note 4

1. How to install and remove software using the APT command. Include several well documented examples as you will need to install software later?

- Formula to install any software: `sudo + apt + install + package name`
- To search any software: `apt + search + "tetris"`
- To remove: `sudo + apt + remove + package name`
- To purge : `sudo + apt + purge + package name`
- To full upgrade : `sudo + apt + full-upgrade + package name`

2. How to create a shell script step by step including screenshots and how to run it?

- Step 1: Open the text editor application
- Step 2: Save the file name as `FileName.sh`
- Step 3: The first line in the file must be shebang or shell interpreter. In the case of bash it would be **#!bin/bash**
- Step 4: Save the update
- Step 5: To run the script, use the following command on terminal: `bash ~/folder name/file name`
